

~~Abstract~~ ABSTRACT OF THE DISCLOSURE

~~Method for receiving or transmitting messages~~

~~The use of shortened spreading codes,~~
especially in the paging channel, for the purpose of
correlation in ^{the} reception of CDMA signals, provides
for power-saving measures such as, for example, the
intermittent turn-off of A/D converters or correlators.

To preserve the orthogonality of the spreading codes,
and ~~the~~ spreading codes used ^{are} ~~must be~~ selected in such a
manner that, if possible, they do not correlate with
the paging channel spreading code.
